

AJAY SUDHAKAR GANDE

Data Analyst · BI Dashboards · SQL · Python

(+91) 70669-83999 | ajaygande1@gmail.com | Chh. Sambhajinagar, Maharashtra | Open to Relocation | [LinkedIn](#) | [GitHub](#)

EXPERIENCE

Junior Data Analyst | Strapie Technologies

Sep 2025 – Present

- Built and delivered 25+ automated dashboards in Zoho Analytics across 7 manufacturing clients, consolidating data from Zoho Desk, CRM, Projects, and Recruit into live management views, eliminating manual reporting across all accounts.
- Monitored KPIs across client departments to identify performance trends, bottlenecks, and anomalies; translated findings into actionable recommendations and presented insights directly to clients in dashboard review meetings.
- Developed 5–6 Zoho Creator data entry applications based on analytical requirements, creating structured data pipelines that fed directly into client dashboards and reporting workflows.
- Maintained live dashboard infrastructure with automated refresh cycles (hourly to weekly); diagnosed and resolved pipeline failures to ensure uninterrupted reporting across all client accounts

Junior Data Analyst Intern | Angel Infotech Group

Mar – Jun 2025

- Cleaned and restructured a large, noisy survey dataset from a SQL source — removed inconsistencies, standardized response formats, and produced a structured, analysis-ready dataset using Python (Pandas).
- Built a Power BI dashboard with full data modeling across a multi-district survey dataset; implemented dynamic slicers enabling stakeholders to dynamically slice findings by geography and response category.

PROJECTS

DataCo Supply Chain SQL Analytics — SQL, SSMS [Link](#)

- End-to-end SQL analytics on 180,519 supply chain orders across 5 markets, investigating delivery performance, profitability, and regional sales imbalance.
- Found 57.28% of orders arrive late and First-Class shipping carries a 100% late delivery rate. traced to a scheduling misconfiguration, not a carrier issue.
- Uncovered gross losses (\$3.88M) at 97.89% of total profit (\$3.97M), driven by a blanket discount policy applied across all 50 product categories regardless of margin impact.

AdventureWorks Sales Analytics Dashboard — Power BI, DAX [Link](#)

- Built a 5-page interactive Power BI dashboard analyzing the Microsoft AdventureWorks dataset (FY2018 to FY2020), engineering 47 DAX measures across a 7-table star schema.
- Identified that Bikes drive 86% of total revenue (\$94.65M) at a low 11.11% profit margin, whereas Accessories deliver a 49.88% margin but contribute just 1.16% of revenue, revealing a significant category diversification opportunity.
- Revealed a 52.27% YoY revenue growth in FY2020, pinpointing the United States and Australia as dominant markets while flagging Germany, France, and Canada as underpenetrated regions for expansion.

Superstore Revenue & Profit Monitoring System — Python (Pandas, Matplotlib) [Link](#)

- Automated reporting pipeline that combines monthly sales files, validates data quality across 6 checks, calculates KPIs, and exports stakeholder-ready reports from a single notebook run.
- Implemented 5 rule-based risk alerts (loss-making products, high-discount items, margin by category/region, MoM drops) to surface profitability risks beyond descriptive reporting.
- Generated 12 structured CSV outputs: monthly KPI summaries, business risk alerts, and a plain-language insight file replacing manual monthly reporting workflows entirely.

TECHNICAL SKILLS

BI & Visualization: Power BI, Zoho Analytics, Zoho Creator (data entry apps)

Programming: Python (Pandas, Matplotlib)

Databases: MySQL, SSMS

Excel: Pivot Tables, Power Query

EDUCATION

Master's Degree | Data Science | CGPA: 8.72 | MGM University

2026

Bachelor's Degree | Computer Science | 76.67% | Dr. BAMU

2023
